

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for tracking files contained on ~~assigning a unique label to~~ a storage medium, the method comprising:

a) ~~—~~ determining whether the storage medium has been assigned a unique volume label and a unique storage medium label, the unique storage medium label uniquely identifying the storage medium;

b) ~~—~~ if the storage medium has not been assigned a unique volume label and a unique storage medium label, then

(i) determining a unique storage medium label for the storage medium,

(ii) determining a unique volume label for the storage medium,

(iii) writing the unique volume label onto an external portion of the storage medium, and

(iv) providing a command to generate a label based on the unique storage medium label, the label to be associated with the storage medium; ~~and~~

e) ~~—~~ updating a database with an association between each file stored on the storage medium and the storage medium; ~~based on files, if any, added to or deleted from the storage medium~~

determining that at least one file contained on the storage medium has been added or deleted; and

updating the database to reflect each added or deleted file.

2. (Currently Amended) The method of claim 1 further comprising:

d) ~~—~~ synchronizing the database with a database on a device apart from the read/write machine.

3. (Currently Amended) The method of claim 2 wherein the read/write machine is a personal computer and the device is a handheld device. ~~Carried out on a read/write machine.~~

4. (Currently Amended) The method of claim 3 wherein the device is an untethered handheld device.

~~The read/write machine is a handheld device.~~

5. (Cancelled)

6. (Previously presented) The method of claim 1 wherein the label based on the unique storage medium label is a bar code label.

7. (Original) The method of claim 1 wherein the act of determining a unique volume label is based, at least in part, on state information accessible to the read/write machine.

8. (Original) The method of claim 7 wherein the state information is a count sequence.

9. (Original) The method of claim 1 wherein the database includes records, each record including a first field having a value associated with the unique volume label, and a second field having a value associated with a file stored on the storage medium.

10. (Currently Amended) [[A]]The method of claim 1, further comprising:

d) —accepting information read from a label associated with the storage medium without reading the storage medium;

e) —converting the accepted information into a database key;

f) —requesting records from a database instance using the database key;

g) —accepting records in response to the request; and

h) —rendering information about the accepted records.

11. (Original) The method of claim 10 wherein the label associated with the storage medium is a bar code and wherein the information read from the label is accepted from a bar code scanner.

12. (Original) The method of claim 10 wherein the information about the accepted records rendered includes file names.

13. (Original) The method of claim 12 wherein the accepted information read from a label associated with the storage medium is read by a handheld device, and the information about the accepted records is rendered on the handheld device.

14. (Original) The method of claim 13 wherein the read label is converted into a database key by the handheld device, the records are requested from a database instance using the database key by the handheld device, and the records are accepted in response to the request by the handheld device.

15. (Currently Amended) A method for matching file parameters with one or more external storage media, each of the one or more storage media having an associated label, the method comprising:

a) ~~accepting at least one search parameter from a set, the set comprising: one or more search parameters selected from a group of parameters consisting of~~ (A) file name, (B) file size, (C) file author, and (D) file type;

b) ~~generating a query based on the search parameters;~~

e) ~~accepting one or more records returned in response to the query generated;~~

determining at least one label corresponding to each record; and

determining an external storage medium corresponding to each label.

d) ~~rendering information associated with each of the one or more records accepted, the information rendered being related to the label associated with the storage medium storing one or more files identified with the one or more records accepted.~~

16. (Currently Amended) The method of claim 15 wherein the labels are machine to readable labels, the method further comprising:

e) ~~accepting information read from the machine to readable labels;~~

f) ~~if the accepted information read from the machine to readable labels matches information associated with any one of the one or more records accepted, then generating a first indicator, said first indicator able to be perceived by humans.~~

17. (Currently Amended) The method of claim 16 further comprising:

g) ~~if the accepted information read from the machine to readable labels does not match information associated with any one of the one or more records accepted, then generating a second indicator, said second indicator able to be perceived by humans.~~

18. (Original) The method of claim 17 wherein the first indicator is a first audible sound, and the second indicator is a second audible sound.

19. (Original) The method of claim 15 wherein each of the labels include human to readable part, and wherein the information associated with each of the one or more records accepted corresponds to the human to readable part of the labels.

20. (Currently Amended) An apparatus for tracking files contained on ~~assigning a unique label to~~ a removable storage medium, the apparatus comprising:

a) ~~—~~means for reading files from and/or writing files to a removable storage medium;

b) ~~—~~means for generating a label;

e) ~~—~~means for determining whether the removable storage medium has been assigned a unique volume label and a unique storage medium label, the unique storage medium label uniquely identifying the storage medium;

d) ~~—~~means, if the storage medium has not been assigned a unique volume label and unique storage medium label, for

(i) determining a unique storage medium label,

(ii) determining a unique volume label,

(iii) instructing the means for reading and/or writing files to write the unique volume label onto the storage medium, and

(iv) providing a command to generate a label based on the unique storage medium label, to the means for generating a label; ~~and~~

e) ~~—~~a database, wherein the database ~~is updated based on files added to or deleted from~~ contains an association between each file stored on the removable storage medium and the removable storage medium;

means for determining that at least one file on the removable storage medium has been added or deleted; and

means for updating the database to reflect each added or deleted file.

21. (Original) The apparatus of claim 20 further comprising: f) means for synchronizing the database with a database on a device apart from the apparatus.

22. (Original) The apparatus of claim 21 wherein the device is a handheld device.
23. (Original) The apparatus of claim 21 wherein the device is an untethered, handheld device.
24. (Original) The apparatus of claim 20 wherein the means for reading files from and/or writing files to a removable storage medium are at least one of (a) a floppy disk drive, (b) a CD ROM drive, (c) a ZIP drive, and (d) a DVD drive.
27. (Original) The apparatus of claim 26 wherein the state information is a count sequence.
28. (Original) The apparatus of claim 20 wherein the database includes records, each record including a first field having a value associated with the unique volume label, and a second field having a value associated with a file stored on the removable storage medium.
29. (Currently Amended) The apparatus of claim 20, further comprising:
- ~~f)~~—means for reading a label associated with the storage medium without reading the storage medium;
 - ~~g)~~—means for accepting information read, by the means for reading, from a label associated with the storage medium;
 - ~~h)~~—means for converting the read label into a database key;
 - ~~i)~~—means for requesting records from a database instance using the database key;
 - ~~j)~~—means for accepting records in response to the request; and
 - ~~k)~~—means for rendering information about the accepted records.
30. (Original) The apparatus of claim 29 wherein the means for reading is a bar code scanner, and wherein the label associated with the storage medium is a bar code.
31. (Original) The apparatus of claim 29 wherein the information about the accepted records rendered includes file names.
32. (Original) The apparatus of claim 29 wherein the means for rendering is a display.
33. (Currently Amended) The apparatus of claim 29 further comprising:

~~h)~~—the database.

34. (Currently Amended) The apparatus of claim 33 further comprising:

~~m)~~—means for synchronizing the database with a database maintained by a separate machine which created the storage medium.

35. (Currently Amended) An apparatus for matching file parameters with one or more external storage media, each of the one or more storage media having an associated label, the apparatus comprising:

~~a)~~—a user input device for accepting at least one search parameter from a set, the set comprising: one or more search parameters selected from a group of parameters consisting of (A) file name, (B) file size, (C) file author, and (D) file type;

~~b)~~—a component configured to generate means for generating a query based on the accepted one or more search parameters;

~~e)~~—a component configured to accept means for accepting one or more records returned in response to the query generated;

a component configured to determine at least one label corresponding to each record;
and

a component configured to determine an external storage medium corresponding to each label.

~~d)~~—~~means for rendering information associated with each of the one or more records accepted, the information rendered being related to the label associated with the storage medium storing one or more files identified with the one or more records accepted, wherein the label is provided on the storage medium without storing it on the storage medium.~~

36. (Original) The apparatus of claim 35 wherein the labels are machine to readable labels, the apparatus further comprising:

e) a label reader for reading information read from the machine to readable labels; and

f) an output means for generating a first indicator able to be perceived by humans if the accepted information read from the machine to readable labels matches information associated with any one of the one or more records accepted.

37. (Original) The apparatus of claim 36 wherein the output means further generates a second indicator able to be perceived by humans if the accepted information read from the machine to readable labels does not match information associated with any one of the one or more records accepted.

38. (Original) The apparatus of claim 37 wherein the output means is a speaker, wherein the first indicator is a first audible sound, and wherein the second indicator is a second audible sound.

39. (Currently Amended) The apparatus of claim 35 wherein each of the labels include a human ~~to~~ readable part, and wherein the information associated with each of the one or more records accepted corresponds to the human to readable part of the labels.

40. (Currently Amended) The method of claim 1 wherein if the storage medium has not been assigned a unique volume label and a unique storage medium label then the method further comprises:[[,]]

[[-]] generating a label based on the unique storage medium label, and

[[-]] fixing the generated label to the storage medium without storing it on the storage medium.

41. (Currently Amended) The apparatus of claim 20 further comprising means, if the storage medium has not been assigned a unique volume label and a unique storage medium label, for

[[-]] generating a label based on the unique storage medium label, and

[[-]] fixing the generated label to the storage medium without storing it on the storage medium.

42. (Previously presented) The method of claim 15 wherein the information rendered is related to the label associated with the storage medium storing one or more files identified

with the one or more records accepted such that a user or a scanner can distinguish the storage medium including the label from other storage media.

43. (Currently Amended) The method of claim 1 further comprising:

⌚—updating the database based on files deleted from the storage medium.
